

InnoVe Introduces VoIP Service Offerings with the Go2Call SIP Dialer

Evanston, IL. Dec. 15th, 2005

Go2Call.com, Inc., a leading international hosted VoIP provider, announced today that InnoVe Communications, Inc. will distribute the award winning Go2Call SIP dialer for PC-based call shop and residential use in the Philippines. These solutions will be offered through Globelines Broadband, a division of InnoVe that will target the immediate and increasing need for VoIP services within the newly deregulated Philippine telecom market.

InnoVe searched for a hosted VoIP calling solution that could meet their needs for call quality and flexibility. Go2Call worked closely with InnoVe to design a solution that met their quality requirements while offering them the ability to scale in size. Successful testing of the Go2Call Softphone within many challenging environments convinced InnoVe to select Go2Call as their partner. Operating with both low and high bandwidth, the dialer performed above InnoVe's expectations, even in cases where jitter and delay posed a great threat.

The reliable performance of the Go2Call SIP Dialer in difficult environments like those tested in the Philippines contributed to recent recognition of the Go2Call SIP dialer by industry experts. The Softphone received an esteemed "Product of the Year" award by TMC NET and Internet Telephony Magazine. The latest press release by both companies is available at www.go2call.com.

InnoVe and Go2Call are excited about the future of their partnership and feel they will benefit from the market's rapid adoption of VoIP services. "In addition to the success of the deployed branded dialer, we look forward to expanding our current offering to one that provides and supports the full capabilities of the Go2Call Platform, including an SMB solution and residential offering," stated Matthew Lloren of InnoVe's Product Development Team.

Go2Call recently released the SMB edition of the Go2Call Enterprise offering. Including advanced, web-enabled provisioning and management tools, the hosted solution allows service providers to easily offer small to medium businesses a flexible VoIP calling solution. The SMB solution supports full inbound and outbound capabilities with DIDs in two dozen countries and gives businesses the ability to transcend geography. The SMB edition also supports essential services and features such as voicemail, call forwarding and abbreviated dialing. Designed to integrate with common hardware, Go2Call's SMB solution enables businesses to take advantage of VoIP services with minimal implementation costs.

"We are glad to have enabled InnoVe in this initial offering of VoIP services, and as the market for VoIP services in the Philippines grows, we look forward to working together as their strategic technology partner for a variety of VoIP offerings," said Larry Spear, Go2Call Co-Founder.

About Innove Communications, Inc.

Launched in the Philippines in October 2003, Innove Communications, Inc. is a wholly-owned Globe Telecom subsidiary focused on integrated data and voice wireline services. It brings together the popular Globelines and GlobeQUEST brands to provide innovative, next-generation telecommunications solutions to individuals and enterprises across Luzon, Visayas, and Mindanao. The company is financially strong, focused and flexible, with a consolidated network and internal organization that enhances its ability to be more customer-centric and dynamic.
